

Download Tomcat

- Download: <http://tomcat.apache.org/download-60.cgi> Make sure you download the .tar.gz if you're on a mac or the start scripts won't be executable and you'll have to chmod them.
- Unpack tomcat somewhere

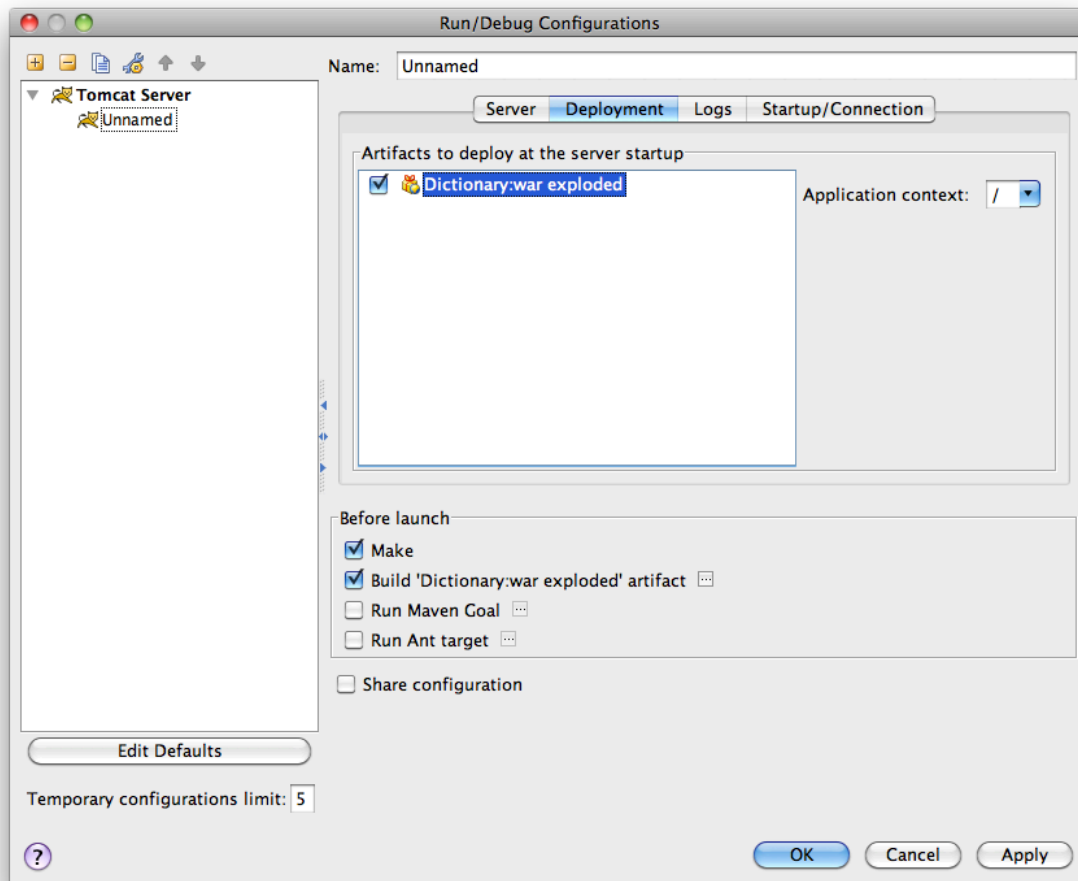

Tomcat IntelliJ Integration

- In IntelliJ Run->Edit Configurations
- Add a Tomcat -> Local configuration
- For Application Server: click 'Configure...'

- Click 'Add' and select the tomcat dir you unpacked

- Click 'Deployment' in the top row of tabs, and check 'Appname:war exploded'
- From Main IntelliJ Window Run->Run and see if tomcat starts and loads the app
